

The Reusit family are learning how to compost. Colour in the picture and see what you can learn too!

Fun Facts about composting:

- One third to two thirds of the waste you produce can be composted!
- By composting at home you are reducing the amount of waste sent to landfill.
- To make compost you need an equal mix of “green” items (fruit & veg peelings, grass, tea bags) and “brown” items (dead leaves, twigs, paper, egg shells)
- The compost is made by “heaters” (bacteria & fungi) and “chompers” (worms, beetles & woodlice). The heaters work first and break down the softer food and then the chompers eat the tougher material.
- Composting happens much quicker in the summer than in the winter.
