## AMBER

AMBER (Advanced Materials and BioEngineering Research) is a Science Foundation Ireland funded centre that provides a partnership between leading researchers in materials science and industry. They are researching materials that will transform everyday products of the future, from mobile phones to knee implants, batteries to plastics.

AMBER develops training and educational programmes which impact all levels of the formal education system from primary school to fourth level.

### Events at the Let's Talk Science Festival

#### The Great Plastics Debate Fri 13<sup>th</sup> Nov from 1pm to 2pm

- 🧪 So much plastic, so little time to decide what to do with it! This workshop will introduce some researchers searching for solutions to problem plastic and could reframe the plastics debate. We'll share what we think: that plastics can be viewed as a crucial resource, that we can put in place recycling infrastructure and find new ways to utilise plastics.
- 🧪 But we also want to know what you think. The format for this online event will involve short talk from AMBER scientists, alongside polls, and followed by breakout rooms so that, you, the audience becomes the presenter.
