iCRAG

Irish Centre for Research in Applied Geosciences (iCRAG) is a team of researchers creating solutions for a sustainable society. iCRAG develops important science and technologies to better understand the Earth's past, present, and future and how people are connected to it. They drive research into sustainable discovery of energy resources and raw materials, protecting groundwater and marine resources, and protection from flooding and landslides.

iCRAG education and public engagement programme works to develop the next generation of geologists, engineers and scientists.

Events at the Let's Talk Science Festival

Mining and Society - Live with iCRAG Sat 14th Nov at 11am

What resources do we use every day? What powers our society? Where do these materials come from? And what does a sustainable society look like in the future? Join researchers from iCRAG for a live, interactive discussion about the resources we use, where they come from, and sustainability as we move forward into the future. All you need to take part is a computer, tablet or smartphone and the enthusiasm to ask some interesting questions!
