

Help the Reusit family and learn about energy by colouring in this picture.

Fun Facts about energy:

- Energy is what makes things work, move, heat up, cool down etc. Energy gives us light, makes our cars go, operates the TV and food is the energy that keeps us going!
- Renewable energy is energy that comes from things like the sun, wind, and waves. We want to use more of this type of energy.
- Non renewable energy comes from things like oil, coal and gas. These are called “fossil fuels” and we should try and use less of these.
- Recycling saves energy Using recycled aluminium scrap to make new aluminium cans, for example, uses 95 percent less energy than making aluminium cans from bauxite ore, the raw materil used to make aluminium.
